## Opportunities

### Color Guard

### Field Training Exercise

### Excel at Competitions

### Commissioning Ceremony

## Academic Minor Options

A Minor in Military Science provides students with hands on training for leadership, management, decision making, and team building skills that apply in both military and civilian career fields.

### Four-Year Program

Basic Course refers to first and second year courses that are designed for beginning students who want to try Reserve Officers Training Corps (ROTC) without obligation. The Advanced Course refers to last four semesters of courses that prepare students to be commissioned as officers in the United States Army, the Army Reserves, or the Army National Guard. Upon entry into the Advanced Course, cadets are required to sign a contract with the Department of Army agreeing to complete the ROTC program and accept a commission as a Second Lieutenant.

### Two-Year Program

This program is for those students who have at least four semesters of work remaining on campus as either undergraduate or graduate student, and who did not participate in ROTC earlier. These students enter the Advanced Course of the program after attending the Basic Course (BC), a four-week, all expenses paid, summer leadership internship or have attended a U.S. military branch's Basic Training. Three years of High School JROTC may also meet the basic course requirement.
